Steam Trains Specifications Sheet // 3 MEG 101 - 4 Wheel Switcher

About the MEG 101

Part 3 of this collection gathers the sounds of the charming light railway MEG 101 from 1949, chuffing its way through fields and forests.

This collection contains the unique sound of this lovely little steam train - featuring chuffing through railroad crossings, funny sounding whistles, rail clatter, and the creaking of wooden wagons. Takes include riding, idling, drive-bys, departing and arriving trains, rattling, squeaking, clacking, coupling, bells, whistles, and air releases.

It was a challenging shoot since this Train drives only in summertime, and we struggled with birdsong and crowds. We had to repeat the recordings several times to give you the cleanest possible recordings for your project.
